

PROFESORES

MARCOS PABLO RUSSO (MARCOSPR1974@GMAIL.COM)

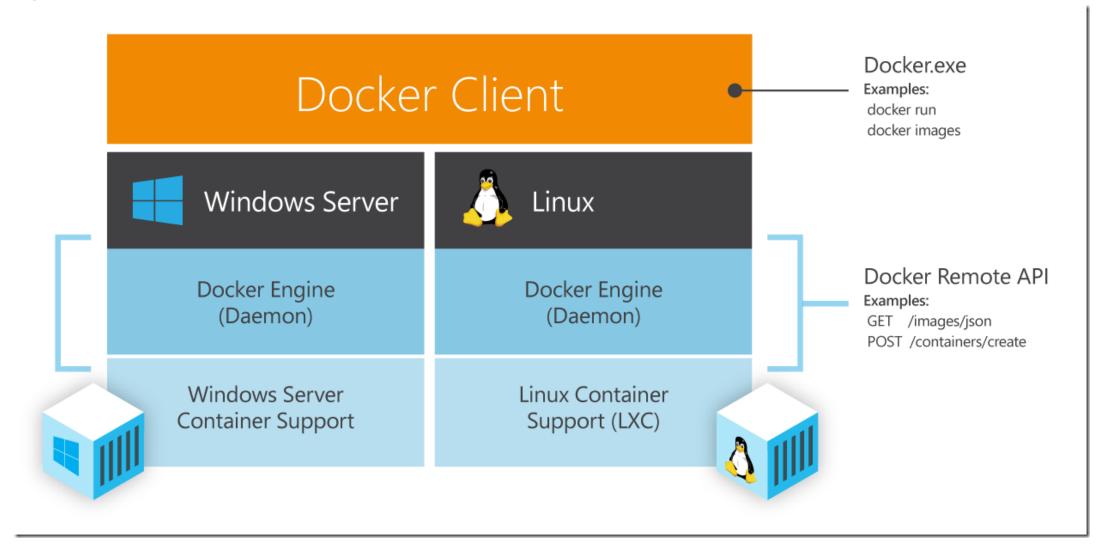

MARTIN ISUSI SEFF (MARTINISUSI@GMAIL.COM)

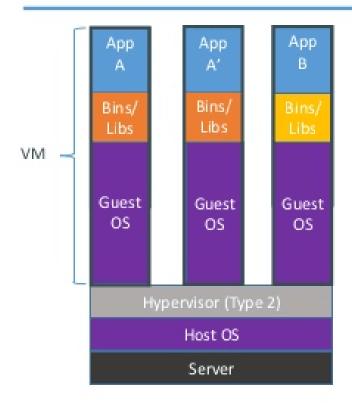

- Docker es una herramienta tanto para el sysadmin como developer.
- Ayuda a automatizar el despliegue de aplicaciones dentro de de contenedores de software, proporcinando una capa de adicional de abstracción eliminando el overhead que provoca corer un Sistema operative virtual para cada una sola aplicación.
- Además de la propia aplicación que gestiona los contenedores (a los que llamamos docker engine o docker), existe un repositorio de imágenes creadas por la comunidad, llamada docker hub.
- Tanto los developers como los sysadmin pueden compartir entornos de trabajo (imágenes).

- Corre en equipos de 64 bits.
- Gran parte de éxito de docker se basa en su fácil portabilidad y su ligereza.
- Soporta los sistemas operativos Windows, Mac y obviamente GNU/Linux.
- Docker es tanto cliente como servidor.

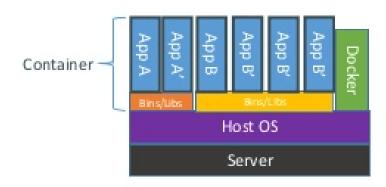

- Un gestor de entornos de desarrollo virtuales (vagrant).
- Un software de virtualización (hypervisor).
 - (kvm, xen, vmware, virtualbox, etc).
 - Un gestor de configuración (puppet/chef).
 - Un simple contenedor de software (lxc).
 - Aunque se parece como servidor.

Containers vs. VMs

Containers are isolated, but share OS and, where appropriate, bins/libraries

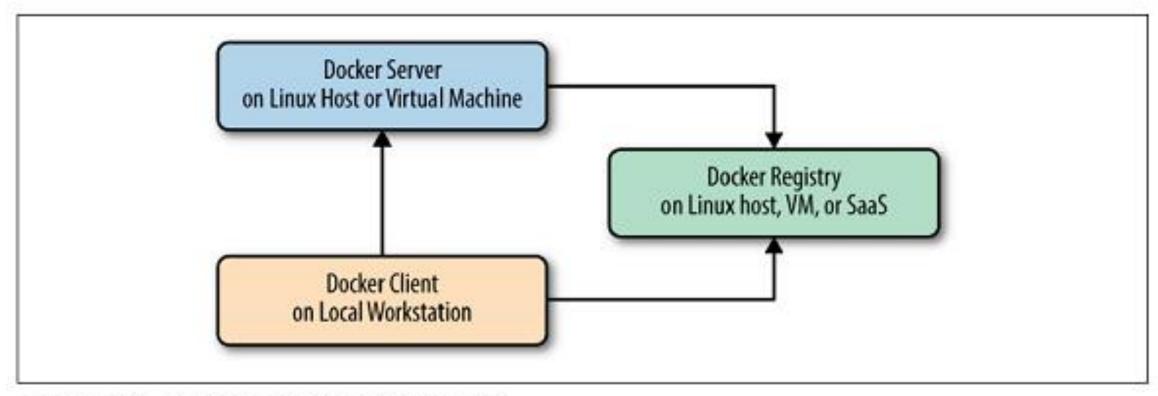

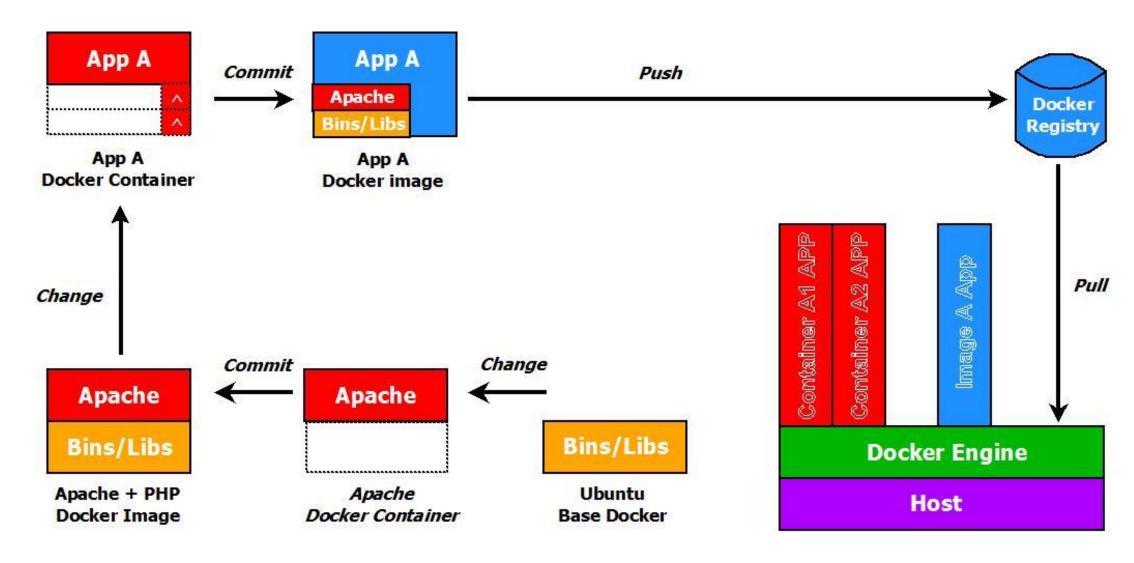

Figure 2-3. Docker client/server model

CICLO DE VIDA

ARQUITECTURA DE DOCKER

- WEB
 - https://www.docker.com
- HUB
 - https://hub.docker.com
- DOCUMENTACION
 - https://docs.docker.com
- API
 - https://docs.docker.com/engine/api/

INSTALACION

- Ubuntu
 - apt-get install docker.io
- Centos/OS
 - yum –y install docker docker-commn container-selinux
- Debian
 - apt-get install docker-engine

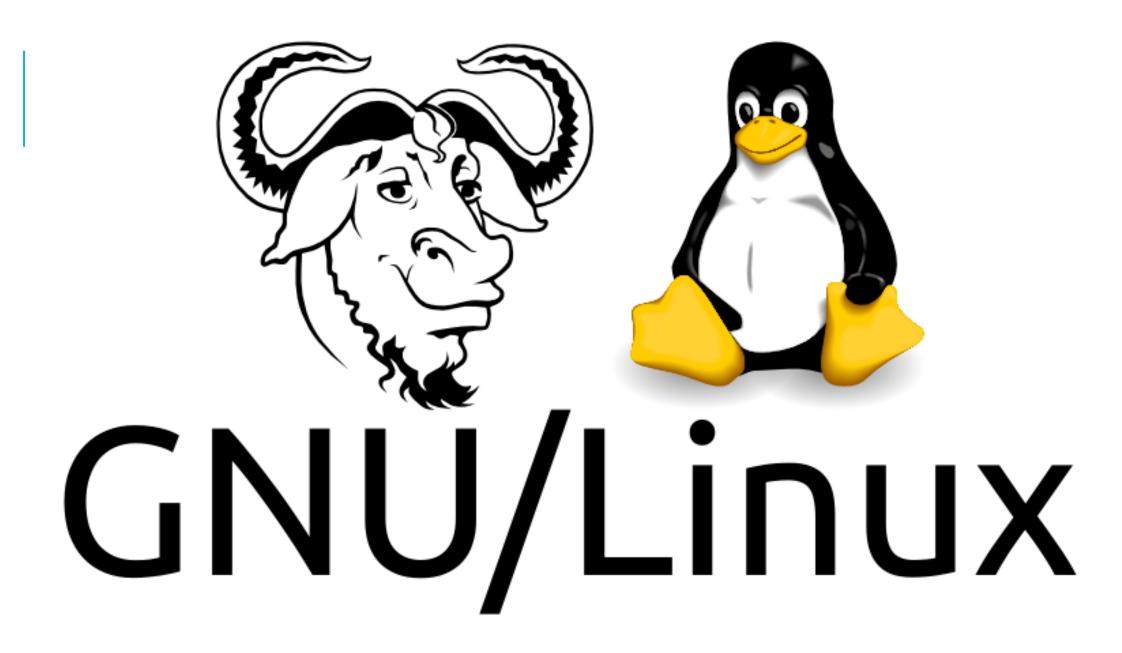

https://docs.docker.com/engine/installation/linux/

INSTALACION

```
localhost:~# ps aux | grep docker
2106 root     0:21 /usr/bin/dockerd -p /run/docker.pid
2237 root     0:36 containerd --config /var/run/docker/containerd/containerd.toml --log-level info
2701 root     0:00 grep docker
```

INSTALACION

usermd –G docker –a USUARIO

COMANDOS

ifconfig

route

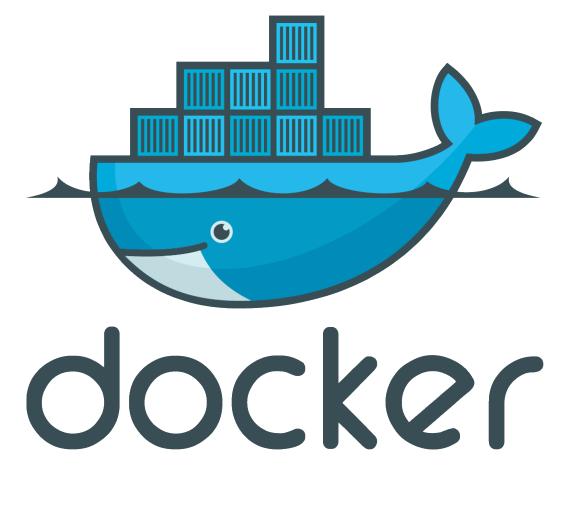

```
localhost:~# ifconfig
         Link encap:Ethernet HWaddr 02:42:05:C7:D4:60
